

Recording sound observations

Choose one of the investigations you have just completed and write and/or draw about it below.

Draw and/or write one of the objects investigated.

How did you change the object to change the sound?

Stretched the rubber bands the other way along the box.

What was the effect on the sound?

The sound was a higher pitch.

Why do you think this effect happened?

Because the rubber bands were tighter and didn't vibrate as much.
